

ExcelgestionMobile v8 – Full Tutorial

New: Column D "Stock" is now automatic. It is no longer necessary to adjust stock manually.
New: ticket printing via "Tickets" sheet and ad'hoc printer.

Presentation, free demo version to download, screenshots, video tutorials:

created 17 Oct. 2021 – updated 6 June 2024

Introduction / Presentation

ExcelgestionMobile v8 is a semi-automatic billing program on Microsoft Excel® that works on mobiles and computers. In addition to billing, **in particular, it offers simple automatic stock management with permanent inventory (it is the only invoicing program running on iOS/Android mobiles that offers it)**, the management of payments by type, as well as very complete statistics. It is an Excel template/model/file in XLSX format. **You can therefore import and export all your data by simple copy-paste** (paste special, Values). You can switch it from device to device just by copying the Excel file. This tutorial allows you to use it in a serene way. Follow his step-by-step explanations. You will quickly memorize them and use the program with pleasure and success. With Excel, everything is logical and all the info is in tables, nothing is hidden. It is advisable to be a little familiar with Excel, just a few basics.

If you need a 100% automatic version, see Excelgestion Full auto POS v4 PC/Mac (<https://www.christian-roux.ch/excelgestion>) with VBA programming, priced at CHF 98.-.

ExcelgestionMobile v8 will be yours for free. I am happy to answer all questions at excelgestion@bluewin.ch / Tel. +41 (0)26 401 05 08.

Compatibility / Miscellaneous important information

Works on **iPad or iPhone*** with the Microsoft Excel or Microsoft Office app (free on screens up to 10.1", the Premium (paid) version of Excel is not required). Also works on **PC/Mac** via WPS Office on PC, Mac (<https://www.wps.com/>) (ask me for a free copy) or via Microsoft Excel. (*With an iPhone, zoom on the "Invoices" and "Archives" sheets. Also works on Android tablet 8", it is necessary to adapt the maneuvers slightly.) I speak below of "invoice", but it can be any other type of commercial document (offer, etc.) For a quick use, I recommend the use of a stylus for certain operations on Excel on mobiles. Capacity of this version: 1000 articles, 1000 customers and suppliers, 10,000 documents in Archives. On request and under certain conditions it is possible to have 10,000 articles and customers or even more (ask me for an offer). **Never** cut and paste in the program, but always copy and paste special (Values) then erase if necessary. Do not change anything in the structure of the document. Do not add or delete rows or columns. The program is multilingual but, for questions of statistics, it must be put in the language of your choice at the beginning of your use. You can use the **iLovePDF app** (on iOS/Android) to transform a PDF into a Word document that respects the positioning of the PDF (free for up to 2 conversions per day). See on my page <https://www.christian-roux.ch/ios/#66> (in french).

NEW - Summary: make your first invoice (on iPad)

Step 1 - Select the customer: On the "Customers" sheet either (1) Scroll/slide the list (go from line 1 down to the following lines) or (2) select the header of column B then at the top the "Search" tool (CTRL+F), or (3) in B1 open the filter, choose "Filter elements" and enter a few letters which represent the name or address of your client, then click "Select all results", then click next to the filter to close it.

In column A, next to your customer that you have found, note the "Partner Ref.", enter or copy and paste (special paste, Values) the number in E1 (and in C1 if you have a different delivery address).

Step 2 - Add an item: On the "Invoices" sheet, do the same as Step 1 but this time (from line 16) indicate in column B the quantity you wish to invoice and in column N the possible % for the item . Repeat for each item. Note: you cannot and should not change the order of the lines.

Step 3 - Invoice: In C16 open the filter, choose "Filter elements" then "Select all" (a "Ok" to is indicated on the right on all lines). Click on the 1st "Ok" on "(Empties)" then next to the filter to close it. Your invoice only displays the items you want to invoice, as well as line 1017 with the transport costs: in C1017 the quantity of 1, in F1017 indicate the shipping amount. Hide column D: Select the header of column D then on the menu that opened: Hide. Column D is no longer visible. Cells A11, A12, A13, A14, N14, A1026 and C1026 can be changed as needed. Don't change anything yet.

Step 4 - Make a PDF: On the "..." at the top right, first save the file. Then again on the "...", choose "Export", "PDF (*.pdf)", at the bottom: "Next". In Name: enter the invoice number, e.g. "1001", "Other storage", "On my iPad" or iPhone (provide the full path if necessary) then at the top right: "Export".

Step 5 - Archive the invoice: On the "Archives" sheet go to the top left. Click on line header 2 and drag the "green selection circle" to before line 1004. Click on "Copy" in the menu that has just opened. Go to the last empty row (e.g. "1013") and click on column A. Click on "Paste Special" from the menu that has just opened, then Values. Your invoice has been copied statically into your Archives. Save your file.

Step 6 - Reset: On the "Invoices" sheet, select the values in column C that you had set as quantities. In the menu that has just opened, click "Clear contents". Do the same in column N for the %. Click in C16 then choose "Filter elements", then "Clear all". Click next to the filter to close it. Click the header in column C and drag to select column E. Click "Show."

1.- Make an invoice in Microsoft Excel for iOS

Summary: Make an invoice (see details below)

- 1.- Select or create and select a customer in the "Customers" sheet.
- 2.- Check and prepare the header of the "Invoices" sheet document.
- 3.- Put the quantities in front of the items (previously created) in col. "C", **the quantities in col. "D" are debited automatically as the invoices come.**
- 4.- Filter in "C16" the "non-empty" cells, Hide the "D" column, Save the file.
- 5.- Print and/or make a PDF. Give as PDF file name the number of the invoice, which you saved from E14, sheet "Invoices".

6.- Filter the visible lines and copy the top lines in "Archives" and paste them at the bottom of the "Archives" sheet.

7.- Delete in "Invoices" the col data. "C" and "N", display "D" and unfilter "C16". Save.

Important note: To make an invoice in front of a client (to go quickly), do not do points 6. and 7.-. Do these steps after!

The screenshot shows the Excel gestion software interface. At the top, there's a menu bar with options like Accueil, Insertion, Dessin, Formules, Données, Révision, and Affichage. Below the menu is a toolbar with various icons. The main area displays a list of products with columns for N° doc, Qté, Y, Stock, Cat/Unit, Prix unitaire, and %. A filter dialog is open, showing a search box and a list of items. Blue arrows and numbers 1-4 indicate specific actions: 1 points to the 'Filtrer les éléments' button, 2 points to the 'Effacer tout' checkbox, 3 points to the quantity '1' in row 1017, and 4 points to the 'C' column header.

N° doc	Qté	Y	Stock	Cat/Unit	Prix unitaire	%
1005	3	6	BD	14,80		
1007	2	2	BD	14,80		
1009	1	6	BD	14,80		
9999	1	-10	Selon poids	8,00		
Total hors TVA						
+ TVA						
Total (TVA incluse)					CHF	
Dont TVA (T1=7,7% / T2=2,5% / T0=0%)					0,57	2,16
Total par TVA (7,7% / 2,5% / 0%)					8,00	88,80

To filter the list, open the filter dialog by clicking on the button at C16 (1), uncheck "Empty" (2). If you make invoices with transport costs, leave the quantity "1" (3) in C1017 all the time. When printing the invoice (or PDF), hide column "D" by clicking on its header and selecting "Hide" (4). To redisplay the col. D, click/drag the "C to E" headings and select "Show".

Select a customer

In the "Customers" sheet, go down the page to display the customers and find the one you are looking for. If the list is long, press the filter button at B1. In the "Search" box enter a few letters that match, eg "schmi" if you are looking for a "Martial Schmidt". Press "Select all results" and click outside the filter dialog to close it. The cells of the cervix. "B" which contain the search displayed. If no cell is displayed, your search does not match any cell content. Note the number in the column "A" from cell "B" which contains your selected customer.

Enter this number in "C1".

If you want to indicate a delivery address, redo the above operation and enter the number in "E1".

Create a new customer

You must fill in the next free line of the "Clients" sheet, the col. "A-E".

On the column "A", indicate the next free number, eg "107". The client list must always be sorted on the col. "AT".

On the column "B", enter the name and address as you want them to appear on the top of the invoice.

E.g. "M. Christian Roux<SautDeLigne>Route de l'École 1<SautDeLigne>1753 Matran. Note: to create a character <SautDeLigne> hold down for a few seconds at the top in the "Formula bar" (which is to the right of "fx "), A pop-up menu is displayed, press "New line".

In the column "D" and "E" you can put other useful data: Telephone, specific conditions (Term of payment, discounts, etc.). You can add columns between the "E" and the "F" if necessary.

You can add large numbers of customers in a few operations, by copying and pasting: ask me!

Prepare the invoice

Go to the "Invoices" sheet (which has this name because it is the one you will print).

Beforehand, you must have created and selected a customer. It is displayed in "A5-B10" (billing address) and if necessary in "E5-P10" (delivery address).

In "A11", select the type of document you want (by default "Invoice", but also "Credit note", "Order confirmation", "Quote", "Receipt", "Delivery slip", "Fee note", "Purchase order" or others).

Note: Keep in mind that unless you previously passed quantities from your "Temp" sheet document (see "**Storing a document for e.g. changing it from Quote to Invoice**"), it is not possible in v8 to take over an old document, e.g. an offer, to change it into an invoice. In this case, you must re-enter it on the basis of a printed or PDF copy.

In "A12" you have a choice of texts, with the drop-down list choose the one that suits you. You can change the displayed text for once. You can create your own texts which will return to each invoice or depending on the case.

In "B13" the current date is displayed automatically.

In "B14" the reference of the person who invoices. You can choose the initials and/or modify the text as you wish.

In "E14" the number is updated automatically as soon as you pass an "Archives" sheet invoice.

In "N14" put the number of days that are the deadline.

In "O13" you can enter a possible advance or down payment. If there is none, leave blank. Enter the possible down payment BEFORE filtering the list of items.

Important: Each time you make a new invoice, you must check and adjust the various points that I mentioned above.

Add an item to the item list

Go to the "Invoices" sheet. The items are on lines 17-1017 (this last line, a bit special, is designated for transport costs. You can reserve the last lines for different transport costs if necessary). Items can be in any order, but must have a unique number.

Note: The invoice presents the items in the order in which they are.

Items should be added one below the other on lines 17-1016. In principle, go to the next empty line. In column "A" indicate the number of your choice (max 13 characters for an EAN13). You can combine letters and numbers.

In column "B" indicate the item designation. Note: to create a <LineBreak> character, keep the top of the "Formula bar" pressed for a few seconds (which is to the right of "fx"). A pop-up menu is displayed, press "New line".

Column "C" will be used to indicate the quantity to be invoiced and "D" the stock (for permanent inventory).

In column "D" the stock is calculated automatically. To add a quantity of stock, select, at the top of the screen, the headers "F-N", the contextual menu "View", and line by line in col. "I", indicate the stock either "50" (the number), or " $=30+20$ " (the formula). Reselect the cols. "F-N" and "Hide" context menu to rehide columns. Each time you make an entry into stock, modify the col. "I".

In column "E" indicate a category or a unit (respect the width of the column).

In column "F" indicate the unit public price. Use comma or period depending on your system for decimal separation.

In column "P" indicate "1" for normal VAT rate, "2" for reduced VAT rate. If you don't have VAT, tell me when ordering so that I can modify it.

You can add several articles in bulk in a few operations, by copy-paste: ask me!

Show (or hide) column "D" or other hidden/shown columns

Important: When you make a PDF or print an invoice, you must always hide before the "D" column.

You can display the "D" column (to see the stock item by item, to see the total weight [line 12], the total value of the discounts granted [line 13], the value of the total margin [line 14]). To show the "D" col if it is hidden, click on the col header. "C", carefully move the selection handle (round, in green) to the right edge of column "E". Click on "View" in the pop-up menu that is displayed.

To hide the col. "D", select in the header "D" to activate the column, click on "Hide" in the pop-up menu that is displayed.

When you add items, and at any time to manage the "back office", you can also display the "G-M" columns (see screen copy below), to indicate the cost and purchase prices and purchase and purchase Net weight, stock entries, supplier, location in the stock, in particular. Select the columns (on column headers) F-N (1) and click on display. Make the changes. Eg For stock entries as follows: " $=50+20+20$ " which changes the column stock. "D". To hide these columns, select the columns G-M (2) (as indicated, then select "hide").

The "Q-W" columns can also be visualized if necessary (in principle not necessary). To hide them, do as shown to show/hide the col. "D".

To place an order with the supplier(s) (Back Office): In the Invoices sheet, cell A11, choose "Supplier order", make columns D, I and J visible. Start by filtering the "Fournisseur" column J, display only one supplier at a time, according to their "Ref" in the Customers sheet. In column D Stock (Invoices sheet), open the filter in line 16 and Filter the items that have the lowest stock. Check for example: "-4, -3, -2, -1, 0, 1 to 5" and enter in column C the quantity you wish to order to have a sufficient stock threshold (variable depending on the item, and many other parameters, see column I Entries). Hide columns that you don't want to show to the provider. Optionally, hide the prices by indicating "No" in D10. Print and make a PDF.

Save your order: Copy these quantities by selecting in C16 "Open link", then copy (entire column C). Go to cell B9 of the Temp sheet and make a special paste, Values. Then copy and paste cells A1:A7. Clear the quantities in col. C.

Repeat the operations for each insufficient quantity which merits the costs of an order, according to the season, the deadlines and the prices that you consider acceptable, supplier by supplier.

When you receive the goods, go back to column B (and subsequent ones, one at a time) of Temp by clicking on the Temp1, Temp2, copy-paste special, Values, etc. Visualize the pass at the same time. D and I and transfer the quantities actually received with the syntax (for example) "=50+20+15" where 50 was the first order and 15 was today's. Calculate your sales prices (column F) using columns G and H. Then delete column C, D10 in PVT, and put the text "Invoice" back in A11. Return the column visualization to how it was initially.

Fill out the invoice

Find the item you want to invoice. Several ways (perhaps the most common is 3.-). You can combine these different tools:

- 1.- Swipe down in the list of items until you find the item you are looking for.
- 2.- Select column "A" ("Ref"), "B" ("Designation") or "E" ("Cat/Unit"), then press the "Search" icon at the top right (a magnifying glass) and enter a few characters or numbers that designate the item you are looking for.
- 3.- Press the filter button at "B16" (most often, or "A16" or "E16"). The filter dialog opens. In the "Search" field, type a few letters or numbers that designate the item you are looking for. If necessary, scroll down the list and press "Select all results" or press the desired result(s). Then press outside the filter dialog to close it.

Enter the quantity you want to invoice at the intersection of the corresponding line and col. "VS".

Go by pressing "Tabulation" on column "D" (thanks to the numeric keypad) and enter the new quantity in stock -> Continue in **"Deduct the quantity, manage the stock"**.

Repeat the item search operation and enter quantities and new quantities in stock.

As soon as you have finished filling in the invoice, filter line 16 by pressing the filter button at "C16", "Select all", check "(Empty)". Click outside the "Sort and Filter" dialog to hide it. Only rows that have quantities are now displayed.

Deduct quantity, manage stock, manage backorders

When you make an Invoice or a Credit note, **the stock automatically changes to col. "D"**.

In principle, you should not have negative stock.

If you want to charge more than your stock allows, you don't have to continue. Control your stock.

The statistics do not count as a negative value the negative stock in col. "D", they ignore it.

Backorders: If an item is definitely out of stock, mark to the right of the designation in the col. "B", e.g. "Item 141, **sold out**".

If an item is temporarily out of stock, mark in the column "B", e.g. "Item 141, **replenishment. Jul. 22,** will follow 5", in col. "C" indicate "0". Keep the customer's order and a copy of this invoice, to ship the item as soon as you receive it. Have your system manage the order to fulfill. Do the same for all

orders you receive during the period when the item is missing. Change only the quantity ("5") to col. "B", that every customer orders you.

Print or make a PDF

On the "Invoices" sheet, you can find out the net weight of the goods that you invoiced if you filled in column "K" when creating your article. The total net weight is displayed in "D12". In principle, you enter the postage amount to be invoiced in "F1017". If you have no transport costs, put "0" in "F1017". You can change the text to "B1017".

You can now hide the "D" column. Select column "D" by clicking on its header then in the popup menu on "Hide".

You can filter line 16 by pressing the filter button at "C16", "Select all", check "(Blanks)". Click outside the "Sort and Filter" dialog to hide it. Only rows that have quantities are now displayed.

Save the file just before doing any PDF/Print.

To make a PDF (to print it is very similar) press at the top right on "...", then "Export", "PDF", "Next", in name the number of the invoice, here "1027", on "On my iPad", then at the top right "Export". The file is exported.

Note: you must be connected to the Internet to print or make a PDF from an MS-Office document.

Pass a document to Archives

On the "Archives" sheet, go to the very top (if necessary see **Moving vertically (or horizontally) in a sheet**).

Press the filter button at "A1". Open the "Sort and Filter" dialog and scroll down the list. Press on "Delete all", then on the same button "Select all" (to check everything), then just below on "(Empty)" to remove the check. Click outside the "Sort and Filter" dialog to close it. Are selected: rows (from 1 to 1003) that have a value in column A, all filled rows from row 1004. The other rows are hidden.

Select the lines that appear at the top between lines 2 and 1003 (between the two "Qty", in col. "A") by clicking in the header of line 2, then dragging the small green circle until to the last line (before the Qty, in col. "A")

On the pop-up menu that appeared, press "Copy".

Go to the very bottom of the sheet (if necessary see **Moving vertically (or horizontally) in a sheet**).

In the next free row (will have a number greater than 1000), select column "A". Light-click on this cell, which displays a context menu. Click "Paste Special", then "Values". The lines you copied above are pasted as text here.

On Android, when you want to pass the invoiced quantities to Archives,

you have to do it a little differently (from PC and iOS) to see all the lines (but only these lines, not the empty lines) which contain quantities: After you have filled out the Invoices sheet for your items and printed and/or makes a PDF of it, select cell A1 (from the Archives sheet) and press precisely on the "funnel" button (1), the dialog box on the right opens. Choose Numerical filters (2), Is different from... (3), enter "0" (4) and validate (5). Only the lines that have a quantity in column A are filtered.

View statistics

On the "Stats" sheet in col. "B" displays the statistics. In line "2" and "3" indicate the start and end date.

In line "4" if you want to display the data of a specific article, indicate its number. In line "5" if you want to display a specific type of payment. Drop-down list available (the list of payment types is in "Set", col. "O") you can modify the list (note that everything is in lowercase, to be respected).

When you want to stop the statistics (eg every night), copy column "B" and paste it (Paste special, Values) in the next free column to the right of the "Stats" sheet. You can add other calculations according to your needs in lines 22 and following.

When you start your activity, before having sold a single item, but having added your purchases and **your starting stock in col. "I"**.

You can also see statistics by filtering the "Archives" sheet. This is extremely useful, especially for knowing how much of a given item has been sold during a given period. Or for a given client, etc.

Storing a document for e.g. changing it from Quotation to Invoice

- 1.- Create the estimate (or offer or other document that you want to be able to recall) normally by filling in all the information. Print it + PDF and pass it to Archives. **The stock in column "D" can be displayed as a debit, but will be returned immediately after:** a quote or an offer does not debit the stock!
- 2.- On the "Invoices" sheet, unfilter the col. "Qty" to show all. Click on "C16" (the word "Qty") and in the context menu choose "Open link", the col. C is selected. Gently click on the selection and from the context menu choose "Copy".
- 3.- On the "Temp" sheet, at B9, click gently and choose "Special paste", then "Values". The contents of the Qty column are pasted into this column.
- 4.- If you had discounts (%), do operations 2.- and 3.- for column "N" (%) in N16. Fill column C with "Temp". Copy-paste special, "Values" from A1:A7 to B1:B7 to identify the document you want to store. Clear data from the "Invoices" sheet document.
- 5.- When you need to transform the estimate into an invoice, do the reverse operation (2.- to 4.-) (you can click gently on line 8 of "Temp" to select the current column). Change the type of document to A11, to "Invoice". Take the customer's information in lines 1-7 of "Temp". Carefully prepare your invoice, print, etc. You have room in "Temp" with 20 storage columns. Delete the now unnecessary data in the "Temp" sheet, for later use.

The "Tickets" sheet to print a receipt

Works on iOS and PC, not tested on Android. The "Ticket" sheet is a copy of the "Invoices" sheet, which is frozen (cannot be edited) except line 1028, which can be entered by you for a greeting text. When you have made a document and want to print it, on Epson TM-T20III (tested), or wireless (or USB on PC) or ink on PeriPage A6 HD 304dpi (tested), Phomemo M02 Pro (not tested, should work), you have to put the filter in B16 (click on the button: Filter elements, Select all, uncheck "Empty") and print via the USB cable. For printing from mobile, and wirelessly, ask me for the exact procedure, it's a little more complicated (therefore a little slower). Set the print zoom to 200% for the Epson, to 69% for the other models. The legibility of the ticket is very good even in 56mm on the wireless models.

The "Locations" sheet to look for the goods in the stock

Note: This sheet should be added by me. To prepare the order, this sheet is sorted by locations in the stock (e.g. from "A1" to Z99"). Here is how to use it: Fill in an invoice (in sheet "Invoices") then print it and make a PDF. Go to the "Locations" sheet (1 below). All the data is displayed, at the top (2) and on lines 26 and following. You had previously prepared the "Locations" sheet: For each physical

item in col. A, you had indicated the reference of the location (3) in your stock. Once all the items have received their reference, you have sorted the list in A16 (4). Before placing your invoice in the "Archives" sheet, return to the "Locations" sheet and in D16, filter on the data "except empties" (5). Print and make a PDF of "Locations". You can search for the goods in your stock before to send it in. Now, archive the invoice and then reset it.

Move vertically (or horizontally) in a sheet

If the sheet has content on many rows, Excel, automatically if there are many rows, displays on the right of the screen, a button to slide down or up. To display this button, if the sheet has enough rows, click briefly on the middle of the screen and drag a little up or down: the button is displayed. Go down or up while keeping the button pressed. The current line number is displayed. Do the same to move horizontally.

Other

Indicate a discount on several (or all) items. Rather than adding it when entering quantities, do it on column N, at the end of entering articles, filtered file in "C16", staying on column N and descending from articles to articles .

Item "Shipping costs" (line 1017 of "Invoices"). If you make invoices that all have shipping costs, I recommend that when you delete the last document, you do not delete cell "C1017". Filter the visible rows to "C16". Indicate the amount of shipping costs (you see the net weight of the order in "D12", if you have filled in column K) that you charge in "F1017". You can choose the text of the transport costs in "B1017" (the list of texts is in "Set", column P).

Make a credit note (= Credit or Credit Note). On the "Invoices" sheet, in A11, select "Credit note". Enter the quantities in col. "C" in negative (ex. "-3"). In "D" add the quantities and not subtract them as in an invoice. Then filter cell "C16" as shown above. If necessary, change the text "C2026" to "The above amount will be credited to you..." Everything else is done like any invoice.

Accept multiple payments. In the "Archives" sheet, column "Q", indicate the following syntax: "=20+34.50" (a "+" between each payment). By pressing "Enter", the total amount paid is displayed.

Control who to send a reminder to. In the "Archives" sheet, display at the same time the column "J" Due date, and the column "Q" Payment including deposit. Where there is no payment and the date has passed, a reminder should be sent. Note: if the screen is not wide enough to see these two columns, you can temporarily hide the "K" to "P" columns.

Send a reminder. Because there are no macros on Excel for mobiles, Excelgestion Mobile v8 does not allow you to reprint a document. Note the document number (col. "C") and print the corresponding PDF file (which you should have archived), eg the file "1075.pdf". If necessary, draw the title "Invoice" in pen and write above "1st reminder", then send the copy to the customer by post. You can also open the PDF in Office, make a screenshot and annotate it in red (eg trace the word "Invoice" and write "1st reminder") and send it by e-mail to the customer. Or modify the pdf in Word (I explain how on request), save it again in PDF and send it by e-mail to the customer.

Deduct an advance or down payment. Enter on sheet "Invoices" the amount of the advance in "O13" (the word "Advance" is displayed in F13 as well as the deduction on line 1021). After, filter the cell "C16" as for any invoice, etc. Don't forget after passing the document to "Archives" to delete cell O13. Enter the amount of the advance in the "Archives" sheet, in "Q-R-S" columns on the appropriate line.

Do not display prices in the "Invoices" sheet. In sheet "Invoices", "D10", modify the value "PVT" in "No". All prices become invisible or zero. Useful for Purchase Orders and Delivery Notes.

Display the "G-M" columns in the "Invoices" sheet. Click on the header of column "F", drag the "green circle" handle to the right until you extend the selection to column N. Gently touch the selection and in the pop-up menu that appears, choose "Show". Work on these cells. To hide these columns, do the reverse operation on the "G-M" columns and choose "Hide".

PDF or paper? I suggest a mixed way: create a PDF of all your documents. Attach a hard copy if you are shipping merchandise and make a hard copy for your records, listed alphabetically by customer name. Up to you!

Edit a PDF file. Open it from Microsoft Office (not Excel), press at the top on "...", "Convert to Word document", modify the document, save it in Word format, export it in PDF. (note that due to a bug on the converter, the amounts of the lines "Total excluding VAT" and the "+VAT" are displayed on the left of the page and that it is not possible to reset them to LAW.)

NEW: Quickly view multiple PDFs. On the "Files" app, PDF files are in one (1) folder. Open a file by selecting "Glance". Swipe the screen on the invoice that is displayed on the right or on the left, this takes you from one file to another. Note: the position of the file in the list is indicated at the top, eg "(3 of 25)".

NEW: Search (eg) a customer in a list of PDF files when you don't know which corresponds to which number. Make on Adobe Reader on PC. Click on the "Edit" menu then on "Advanced search". Select the "In all PDF documents in" option, scroll down and click "Browse". Select the folder in which to start your search and click "Ok". Enter the term of your search, e.g. "Dupond", adjust the different options as needed and click on "Search. Double click on one of the results icons to display the corresponding PDF.

Go back in case of error. Excel on iOS allows you to go back a lot (button <- at the top left) when you have made a mistake or want to modify something, even if the file has been saved.

2.- Make an invoice on WPS-Office (Spreadsheets) for PC (ask us for free version)

Notes: You can mix actions with the mouse and the keyboard, but it is possible to do almost everything with the keyboard alone. At no time do you need an internet connection to use ExelgestionMobile v8 on WPS-Office 2016 for PC.

Choose or create and choose a customer: On the "Customers" sheet, indicate in "E1" the customer number according to the list below. Drag (drop down the list), search (CTRL+F) or filter (in B16) as needed. To create a customer, fill in the next free line. Indicate in col. "A" the next number.

Prepare the invoice: On the "Invoices" sheet, the customer is displayed in "A5". Adjust the cells "A11", "A12", "B14", "N14" (number of due days), and if necessary indicate an advance amount in "O13". The invoice number is incremented automatically. You can fill in the cols. "G-M". (Show them, then hide them)

Fill in the invoice: On lines "17" and following are your items (fill them in as needed, eg by making special copy-paste, Values). As with customers, swipe, search or filter to find your items. Fill in the quantity in col. "C" and any discount on the column "NOT". Filter the invoice by pressing the button at "C16" and uncheck "Voids". Line "1017" is dedicated to shipping costs. Choose the text in "B1017" and indicate the amount in "F1017" (Calculate and indicate the port according to the weight which is displayed in "D12"). If necessary, choose texts in "A1026" and "C1026".

Hide column "D": Click on the column header. "D". Right-click and select "Hide" (column "D" hides).

Print and/or make a PDF: Check the invoice. Click the "File" menu, "Export to PDF". Replace the file name displayed with the invoice number (in "E14", e.g. "1001"), then "Active sheet", then Ok.

Put the document-invoice in Archives: On the "Archives" sheet, go to the very top (even. "CTRL+Home"). Click on the button and filter in A1, check the "Select all" and uncheck the "Blanks" (lines filter each other). Select the line by pressing on the line header "2" then drag the selection to the last empty line BEFORE line 1004. Do "Copy". Go to the very bottom (ev. "CTRL+End" then go all the way to the left on the next empty col. "A" cell). Do "Modify", "Paste special", "Paste Values", "Ok" (the lines are pasted).

Delete the document-invoice data: On the "Invoices" sheet, select the visible lines of the "C17-C1016" range (the quantities you had filled in) and press the "Delete" key (the quantities are deleted). Do the same with any discounts on the column "NOT". Click the filter button at "C16" and select "Select All" (all rows are displayed.). Click on the col header. "C" and swipe to select cols. "C" to "E". Right-click and select "View" (column "D" is displayed). Save the document-invoice.
